

Power Failure Preparedness

In today's technologically advanced society, we rely heavily on electricity to perform essential functions. Follow these tips for dealing with a possible power failure before, during, and after it occurs.

Before a Power Failure:			During a Power Failure:		
	Get your Disaster-Supply Kit together and make a Family Emergency Communications Plan.		Only use flashlights for emergency lighting. Never use candles during a power outage due to the risk of fire.		
	Check flashlights and portable radios to ensure		To report a power outage contact RI Energy at 1-800-640-1595 or click here. Do not run a generator in a home or garage. Make sure that it is operating in a well-ventilated area. If it is hot outside:		
	they are working. Follow energy conservation measures to keep the use of electricity as low as possible, which				
	can help power companies avoid rolling black- outs.				
	If a storm is coming that may bring power outages, fully charge your cell phone, laptop, and any other devices in advance of a power outage.		◊	In intense heat, when the power may be off for a long time, consider going to a public facility with air conditioning or a "cooling center" that may be open in your community.	
	Fill containers with water and place them in a refrigerator or freezer. This chilled or frozen water will help keep food cold during a power outage.		\Diamond	If you remain at home, move to the lowest level of your home, since cool air falls.	
			\Diamond	Wear lightweight clothing.	
	Keep your gas tank at least half full because gas stations rely on electricity to power their pumps.		\Diamond	Drink plenty of water, even if you do not feel thirsty.	
			If it is	cold outside:	
	Make sure you have cash on hand, as ATMs may not work during a power outage. After a Power Failure:		\Diamond	Put on layers of warm clothing.	
			◊	Never burn charcoal for heating or cooking indoors.	
			◊	Never use your oven as a source of heat.	
			◊	If the power may be out for a prolonged period, plan to go to another location (the home of a relative or friend or a public facility) that has heat to keep warm.	
	Throw out food that may have spoiled due to the refrigerator and/or freezer not working during the power outage.				
	Use caution when going outside after a storm. Never touch a downed wire; always assume that downed wires are live.		Do not travel unless necessary as traffic light may be out during a rolling blackout.		
	If the power outage was caused by extreme heat or a winter storm, check in on elderly or handicapped neighbors to make sure that they are OK.
